Election/Restrictions

Applicant's election without traverse of group I, claims 1-18, in Paper No. 9 is acknowledged.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 15 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. The preamble of claim 11 is drawn to a force resisting device. However, claim 15 recites a sill plate, which sets forth a positive relation between the force resisting device and sill plate and thus appears to be a combination. Applicant should note that claim 15 has inconsistent language and is being considered as drawn to the combination.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-3, 7-14 and 16-18 are rejected under 35 U.S.C. 102(e) as being anticipated by U.S. Patent No. 6,560,940 B2 to Mueller.

Regarding claims 1, 8 and 11, Mueller discloses a force resisting device (fig. 6) across a discontinuous structural element, such as a frame (fig. 6: 110), the force resisting device having an active element (fig. 6: 440).

Regarding claims 2, 9 and 14, Mueller discloses the active element as mounted to the frame member (fig. 6).

Regarding claim 3, Mueller discloses an elastic member in the force resisting device (fig. 6: 450).

Regarding claim 7, Mueller discloses the device as being a connector (fig. 6).

Regarding claims 10, 13 and 18, Mueller discloses an opening in the frame (fig. 6).

Regarding claims 12 and 17, Mueller discloses a shear wall (fig. 1).

Regarding claims 16, Mueller discloses a force resisting device (fig. 6) across a discontinuous structural element, such as a frame (fig. 6: 110), the force resisting device

having an active element (fig. 6: 440). Mueller also discloses a reinforcement element connected to the structure (fig. 6: 100).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 4-6 and 15 rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent No. 6,560,940 B2 to Mueller.

Regarding claims 4-6, Mueller does not specifically disclose elastic and plastic behaviors under varying stresses. However, Mueller discloses the basic claim structure of the instant application, as claimed, and therefore the force resisting bracket of Mueller would inherently behave in a similar manner.

Regarding claim 15, Mueller does not specifically disclose the active element as attached to a sill plate. However, Mueller discloses the active element as mounted to a frame member. Because a sill plate is a frame member, It would have been obvious to one having ordinary skill in the art at the time the invention was made to mount the active element to a sill.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

The cited patents listed on the included form PTO-892 further show the state of the art with respect to frame supports in general.
